# Photonics Industries Software GUI

Graphic User Interface Version 6

Photonics Industries release of software graphic user interface version 6 (GUI V6) for laser control provides a simplified user interface, easier setup and navigability, user-friendly pulse controls, and more robust maintenance functionality. Clear and well-structured, the new software GUI allows the user to find and work with the most important laser controls in a short period of time—allowing for both ease-of-use and speedier system integration. Software download can be accessed on **https://www.photonix.com/software-download/**.

A BETTER LASER CONTROL SOFTWARE

SIMPLIFIED USER INTERFACE
— Understand laser status at a glance with clear indicators.
— Informative messages built-in to assist the user in fully understanding laser capability.

EASIER SETUP
— Single-button laser start-up and power down.
— Enable or disable the laser output at any time.

USER-FRIENDLY CONTROLS
— Easier and streamlined ability to change pulse repetition rate and pulse energy.
— Laser controls are organized more efficiently from basic to more advanced functions.

ROBUST MAINTENANCE FUNCTIONALITY
— Calibration functions allow for simpler laser set-up and installation procedures.
— Proactive warnings are displayed for optimal operation of the laser.
